

# MIGRAINES Hurt All Over

We're studying an  
investigational treatment  
for the relief of  
migraine symptoms.

The RELIEF study is evaluating  
an investigational drug for the  
treatment of active migraine.

You may qualify to participate  
if you:

- Are 18 to 75 years of age
- Have experienced migraines  
for 1 year or more, starting  
before age 50
- Have had migraines on 4-15  
days per month in each of  
the last 3 months
- Have migraines that, if left  
untreated:
  - Cause headache pain of  
moderate to severe intensity  
as well as symptoms such  
as nausea, light sensitivity,  
or sound sensitivity
  - Last between 4 and 72 hours

Other criteria will be reviewed  
by the local research clinic to  
determine if you qualify.

Participation in the study will last  
about 3 months and will require  
3 visits to the research clinic and  
a single dose infusion of study  
drug. The study drug, clinic  
visits, laboratory tests, and study  
procedures will be provided  
at no cost, and compensation  
will be provided to qualified  
candidates.
